

T.H.E.M.

Prototype Packaging

T.H.E.M.'s expertise in providing small volume, flexible stick packaging with quantities ranging from one to millions, facilitates speed to market while minimizing risk and controlling costs.

Our on-site production capabilities provide the ideal setting to evaluate stick packaging without committing to a major capital expenditure. Additionally, as larger co-packers are typically not equipped to deal with these smaller volume production requirements, T.H.E.M. conveniently fills this important void.

T.H.E.M.'s on-site facilities meet the industry's highest standards for quality and consistency, and include comprehensive laboratory support to evaluate, test and launch your product in flexible stick packaging.

Our pilot facility readily accommodates small quantity output for market evaluation and testing, scale-up, specialty merchandisers, or line extensions. Product formats include: powders, liquids, pastes, creams, agglomerations, lotions and gels. This resource represents a valuable opportunity for customers to evaluate, anticipate and resolve any potential obstacles before they become substantial and costly packaging dilemmas in production down the road.

As your production needs increase, T.H.E.M. has established strategic relationships with larger contract manufacturers throughout North America that will fully support your expanded volume requirements for full-scale commercial production.

T.H.E.M.'s experienced engineering team also ensures that product quality and uniformity are maintained upon transfer from our pilot facility to a mass-production operation, whether it's your own, or that of another packager.
