

T.H.E.M.

World Engineering Services

T.H.E.M.'s World Engineering Services has extensive expertise in transferring and 'Americanizing' packaging technologies sourced from around the globe. This important facet of our organization works to solve the most demanding packaging scenarios, and has the knowledge, tenacity, and responsiveness to ensure that your packaging systems function precisely as required and intended.

We're accustomed to the cultural issues of conducting business with overseas companies, and can often act as a valuable liaison to ensure that the lines of communication are clear and that commitments on both sides are fulfilled.

World Engineering Services supports packaging systems implementation through the entire range of creation, development, validation and production.

Value adding services include: structural and graphic design; market analysis; prototyping; test runs and pilot production; systems engineering; and total line integration.

In addition to conversions, the World Engineering Services also provides re-engineering, reconstruction, reapplications and customization on existing packaging equipment, and can design and develop custom systems when the need arises.
